**SELF-STUDY LICENSE:**

**You are invited to use this course for self-study. However, teaching it to another person would require another purchase price and explicit okay from me. I rely on your honor in this situation. Of course, copying the materials for another person, selling it, or giving it away are not permitted. This course is for you only. Thank you.**

**Introduction:**

Logic was the discovery/invention of the ancient Greeks, who, for the first time, developed it in written form. It was primarily the work of Aristotle and Plato.

From logic flowed myriad possibilities for the human race, including the sciences and the scientific method.

At one time, some form of logic was widely taught in secondary schools. Now, we see almost nothing of the tradition. Therefore, students don't grasp the progress of thought and reasoning from beginning to end—nor can they find flaws in that flow.

This a hidden cause for what is inappropriately called ADHD. When attention has nothing to hold on to, it is fragmented. It wanders.

There are worlds and dimensions beyond logic, but without understanding exactly what one is departing from, the ensuing journeys often dead-end in confusion.

Logic is a vital tool. It can be used to analyze any presentation of information or argument, and in this age of information overload, it is indispensable. When one knows the difference between, on the one hand, opinion, suggestion, guess, belief, surmise, and, on the other hand, argument which tries to arrive at a true conclusion, one is ahead of the game—and when one can take apart a serious argument and find what is specifically reasonable and what is unreasonable about it, one is in very good shape indeed.

This 18-lesson course is a solid starting point. It is entirely contained in the teacher's manual and the accompanying MP3 audio files. You study the course by going through each lesson in sequence, as presented. I suggest you do the whole course several times from beginning to end, to extract the full value.

Much success,

Jon Rappoport
